

# A New Type of Transformative Agreement for Research Publishing in Biology

*“A sustainable path to open publication of biomedical research is a long-sought objective among the many science communication initiatives at Cold Spring Harbor. Our transformational offerings provide a model for any research-intensive institution whose scientists wish to make their articles openly available in these long-established, prestigious, not-for-profit journals.”*

— Dr. John Inglis, Publisher of CSHL Press, co-founder of bioRxiv and medRxiv

## Turn your subscription license into an OA publishing license — Immediate benefits for your authors and no extra cost for most institutions

Subscribers to Cold Spring Harbor Laboratory Press (CSHLP) journals now have the option to adopt a Transformative License Agreement. This allows corresponding authors from your institution to publish unlimited OA articles (once accepted for publication), while giving your users access to the complete collection of CSHLP journals.

Transformative license agreements offer a fully OA publishing option for your researchers whose papers are accepted at *Genes & Development*, *Genome Research*, *Learning & Memory*, *RNA*. For more information about a transformative license with Cold Spring Harbor Laboratory Press, please contact Doug LaFrenier at [dlafrenier@cshjournals.org](mailto:dlafrenier@cshjournals.org)

### Benefits include:

- Unlimited open access publication in CSHLP research journals
- Access to the complete collection of CSHLP journals
- No additional cost for most current subscribers (some minimums apply)
- The option to create a branded channel in bioRxiv for preprints posted by your authors (includes medRxiv postings)

Present your institution as an “end to end” open access advocate for the biological sciences.
